### Coudière ouverture totale taille unique

## Indications médicales

Coudière ouverture totale taille unique

**UniPren** is universal 3-layered fabric made of external elastic polyamide self-gripping layer and internal neoprene foam with elastic jersey. Our fabric is soft and elastic and not knitted, what prevents skin against the skin abrasions in the compression zones. The braces made of **UniPren** provide the best stabilization in market.

Detainment of warmth, preventing body overcooling and overheating, Comfort of use – the support contains no thick fibres which can cause abrasions if pressed firmly on patient's skin. Simplicity of use- simple way to put the support on and take it off by the patient. The design of this support guarantees maximum comfort of use, no movement limitation for both women and men. The product is equipped with external elbow cover which perfectly absorbs shocks and bumps.

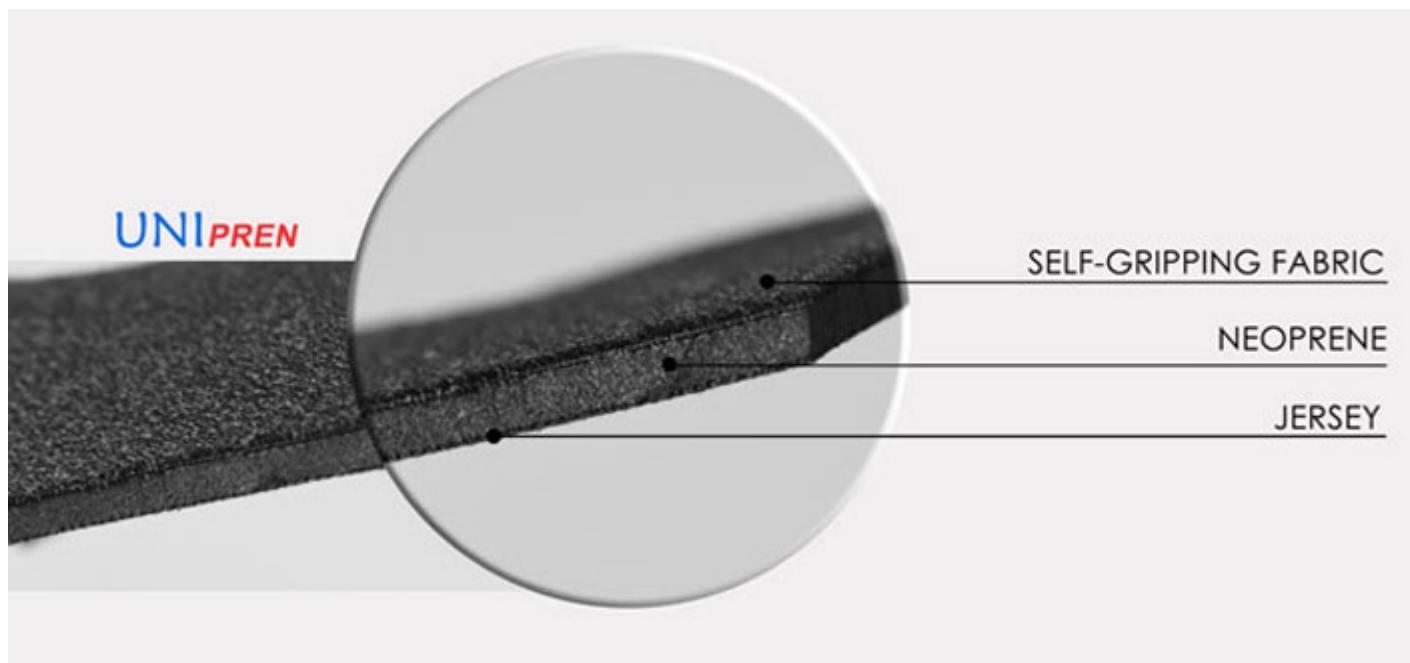

The support is made of material which, pressing muscles, supports blood circulation and oxygen distribution within whole body. The AS-? support eases pressure from muscles and arm, reducing pain connected with overstress and old injuries. Thanks to the maintained constant temperature and elastic pressure, it reduces swelling, helps in healing post-injury effusions and hematoma. It enables faster come back to work or training. Provides protection in contact sports.

in chronic severe pain syndrome of elbow joint caused by injury or overstress;

- chronic overstress and inflammation of epicondylitis (tennis elbow) – reduction of problems, help in healing process

- in sport: injury prevention in tennis, golf, badminton, team sports

- hard physical work connected with rotating movement of fore-arm and hand against resistance.
