Semelles cuir Berkadur

Indications médicales

Berkodur – the supporting arch bridge by Berkemann – increases the wear comfort of your shoes in a simple and natural way by supporting the foot musculature. The arch bridge is perfect for splayfeet, flat feet and fallen arches. It is modelled and anatomically formed after the natural shape of the foot, supporting the longitudinal and transverse arches. It has a shock absorber in the heel area that cushions the energy of every step.

Due to the high-quality, vegetable-tanned leather, the Berkodur arch bridge is permeable and absorbs moisture. The activated carbon layer is odour inhibiting, the silver ions have

an antibacterial effect.
